Flexible Solutions For Your Business Needs

NATURAL CHEMICALS

Natural ingredients are chemical substances occurring in a natural environment that is extracted using a process that does not cause a chemical change in the substance.

ESSENTIAL OILS

Essential oils are compounds which are extracted from plants directly. They are volatile oils that have a specific scent, “essence”, which comes from the plant.

AROMA CHEMICALS

Aroma chemicals are singular compounds that have been synthesized or isolated. They are Odor Active Chemicals that are used in fragrance and flavor industry.
